Note to the Reader

Certain authors, speaking of their works, say “My book,” “My commentary,” “My history,” etc....They would do better to say “Our book,” “Our commentary,” “Our history,” etc., because there is in them usually more of other people’s than their own. (Pascal)¹

At the peak of summer, as a heat wave enveloped the country, the horn blast signaled the start of the Mac — the longest annual freshwater sailing race in the world where hundreds of sailors gather to race across Lake Michigan and Lake Huron from Chicago to Mackinac Island. Wanting to witness the magic, we maneuvered the boat to the outside of the fleet and watched as teams capitalized on the southerly winds, dotting the horizon with spinnakers². In that moment, as I stood at the helm, the boat and wind gently rocking our ship, I was at peace knowing there was no where else I wanted to be.

While I have no aspirations of ever competing in the Mac, I have enjoyed learning to sail over the past several years. Each summer day on the water harnessing the wind (with no particular destination in mind) soothes the wounds of a hard academic year. And, each outing provides a learning opportunity — a chance for my boat to teach me a bit more about being a sailor. Early this summer, my youngest daughter asked if I would take her out, “just the two of us,” for the afternoon and teach her more about sailing. Including her in the preparations, she tied knots and steered our course as I raised the sails. Just as we got underway, the wind caught my hat and sent it flying into the lake. The outing was now a lesson in conducting a crew-over-board maneuver (it was a nice hat). The standard maneuver required that we sail away from the hat, turn through the wind, and then approach the hat from downwind so that we could easily control our speed — me steering a steady course allowing my daughter to reach overboard and retrieve the hat.

To an onlooker only familiar with powered vessels, my actions would seem strange. Instead of turning immediately to recover the hat, we chose to first sail farther away. An abrupt turn easily executed on a powered vessel could result in the sailboat capsizing. In that moment, success required that I employ my knowledge and skills not only to achieving my personal desires (I wanted that hat back) but also to safeguarding the well-being of the vessel and its crew. I believe the same should be true within academia. The success/strength of a portfolio should not be determined solely by the line items on a faculty member’s CV; we should also

¹Pascal, Blaise. *Pascal's Pensées*. (1958) New York:EP Dutton, (#43)

²a large sail that acts as a kite, allowing the wind to push the boat downwind ([seen here in an image from the 2024 race start](#)).

consider how the faculty member has stewarded the mission of the Institute to its benefit, including its faculty and students.

This portfolio reflects on the decisions I have made in charting the course of my career. While I am uncertain of my destination, I can describe my current direction and the principles that guide that direction. As such, this portfolio is organized around the facets of my professional mission and vision, developed alongside a group of colleagues³, that guide my professional activities. I routinely tell my students they should never trust a study that omits a “limitations” section; as such, this portfolio reflects on both my positive intent and areas of concern. I then submit to your determination whether my path is of benefit to the Institute.

 Note

This portfolio was designed to be read online ([click here](#)). However, the PDF version retains all required content.

³During the 2021-2022 academic year, supported by the Center for the Practice of Scholarship and Education, I facilitated a reading of Susan Robison’s *The Peak Performing Professor: A Practical Guide to Productivity and Happiness* with five colleagues. I owe a great deal to the conversations with these amazing women: Eva Andrijcic, Sylvia Carlisle, Heather Chenette, Michelle Marincel Payne, and Jenny Mueller.

1 A Teacher, but Not an Educator

Teachers can fan flames that are already there, but usually cannot create the spark that first attracts a person to something...There is no accounting for desire. Who knows why we are drawn to the things that attract us. Teachers exist to serve such attractions, not create them; otherwise we are no longer teacher[s] but evangelists. (Sells)¹

Assigning grades was the easy way out of doing the “actual work” of teaching...When I eliminated grades it tested my creativity and patience. I was forced to rethink what went on in my class. (Blackwelder)²

These two quotes, side by side, capture the battle that has waged within me over the years as I have navigated my role in the classroom. Like Blackwelder, the idealist in me believes in connecting with others and inspiring them to learn; however, the realist in me resonates with Sells, accepting that I cannot manifest in someone the same joy in the material I have. In an attempt to reconcile these ideas, we might distinguish between a teacher and an educator.

💡 Educator vs. Teacher

A teacher provides instruction, guidance, and feedback during the learning process. In contrast, an educator goes beyond teaching, inspiring students toward an interest and passion in the material.

My growth as a teacher has coincided with a decrease in my student course evaluations. Understanding that these evaluations primarily reflect the student experience, I believe this trend reveals that I have struggled more and more to connect with my students, making it difficult to inspire them. As a result, I am not the educator I aspire to be; however, I have leaned into what I view as my primary responsibility as a teacher: providing rich learning opportunities.

¹Sells, Ben. *The Soul of Sailing*. (2019)

²Aaron Blackwelder in *Ungrading: Why Rating Students Undermines Learning (and what to Do Instead)* (2020), edited by Susan Blum.

! My Professional Mission as a Teacher

To *design high quality learning experiences* for students who want to use data with integrity and educators who want to impact students.

During the Fall of 2020, my grandmother was losing her battle with cancer. With the COVID pandemic at its height, my courses had transitioned to a hybrid delivery meeting twice weekly, and I leveraged this to be with my grandmother during her final days. I would lead four sections of my Introductory course, then drive North of Indianapolis to spend time with family and help where I could, shifting between helping make a meal and meeting with students on Teams. Forty-eight hours later, I would return to Terre Haute for the next class meeting. The flexibility that had been built into my course allowed me to be present with students and my family in a way that I would not have previously thought possible. I place high importance on designing learning experiences that are flexible.

💡 Flexibility in Course Design

Students benefit from structure in a course, but designing those structures to be flexible allows learning to take place in the midst of external shocks to the life of the professor and/or students.

Since the pandemic, I have transitioned the vast majority of my courses to a hybrid structure to promote flexibility for my students (and myself) and allow me to operate out of my strengths. But, this transition has required that I commit time to creating resources to promote student success in this environment. For example, I converted my lecture notes to online texts.³ Available online (and for download as a PDF), the design of this portfolio mimics the design of the texts available to students. In addition to a text, my courses include videos covering key concepts and examples (see Figure 1.1 for an example); and, note packets guide students through the resources and encourage them to take a more active role in summarizing content.

ℹ️ Importance of Moodle

Moodle plays an integral part of my course design, and it is an extension of my classroom (or maybe, the classroom is an extension of my Moodle course). A visit to my class would not tell you nearly as much about my teaching philosophy as my Moodle course. For those interested, I have an example course available to peruse by [clicking here](#).

A course calendar provides guidance on pacing through the material between class meetings, but the resources are available for students to review as their schedule permits.

³I have a text for each course I teach regularly, including [MA223 Introductory Statistics](#), [MA482 Biostatistics](#), and [MA483 Bayesian Statistics](#). I revise the materials and continue to develop new material as my courses develop.

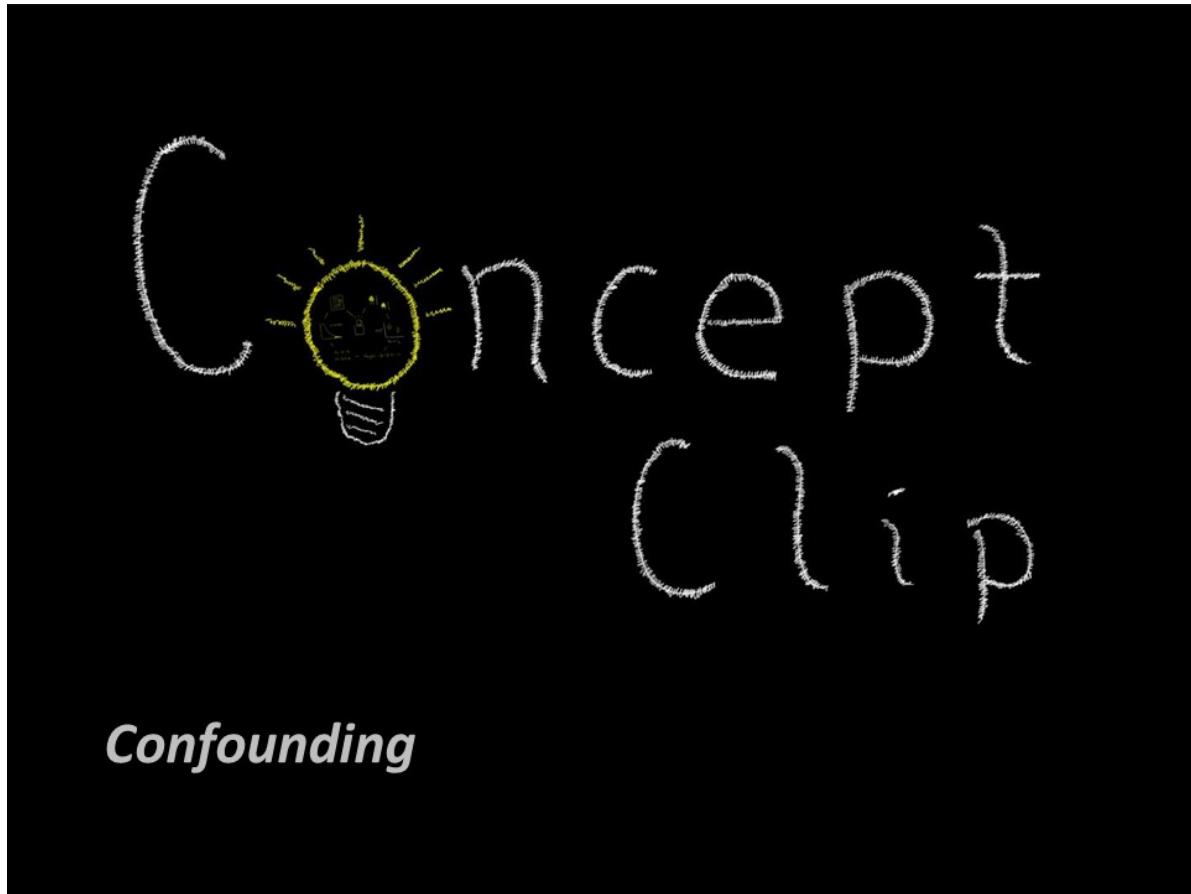

Figure 1.1: Example “concept clip” used in my Introductory Statistics course to discuss confounding.

One strength of the course is the flipped classroom. Being able to watch the lecture videos whenever I needed them helped me learn the content at my pace, and review the content when I did not fully grasp the topic. (MA223 student)

MA223 Introductory Statistics

Named “Engineering Statistics I,” [MA223](#) is the introductory statistics course required by most science and engineering programs on campus. The course emphasizes statistical literacy (speaking the language of statistics and interpreting statistical methods and results), reasoning (defining the need for data to address questions, understanding the role and impact of variability), design (approaches to data collection and the impact of the study design on the conclusions), and analysis (choosing an appropriate methodology and using a statistical computing environment to carry out an analysis). The concepts are introduced in the context of science and engineering applications.

Primary content delivery happens remotely. In-class meetings are reserved for topics that would benefit from discussions or additional examples, attempting to take more abstract concepts and make them tangible. I broadcast these discussions on Teams so that students can engage remotely if they are unable to attend in person. To provide flexibility during assessments, I have transitioned to take-home exams and emphasize projects, often allowing students to collaborate. This also facilitates my transition to alternative grading schemes, which relies on students revising work.

The revision system really assisted with my learning, along with the resources the professor provided. Although the course was difficult, the course structure allowed for me to learn material quicker and more effectively. (MA483 student)

MA483 Bayesian Data Analysis

An interesting course in the curriculum, [MA483](#) provides a different framework for conducting statistical inference. It acts as both an upper-level elective for those who are specializing in statistics as well as an alternate introductory course for those in disciplines that require only probability (such as computer science and electrical engineering).

The asynchronous days are not “days off.” In order to meet deadlines, students are expected to engage with material daily, as outlined in the course calendar. Asynchronous days also provide ample opportunity for me to meet with students to address questions over assignments. While some students prefer in-person meetings, I have a growing number that prefer engaging remotely. For some students, they enjoy the convenience of reaching out from their residence hall (or academic space) without needing to pack up and trek to my office. Others take advantage of receiving help when they are feeling ill. I enjoy being able to have students share their screen when debugging code. I also have noticed an increase in the number of students who prefer to correspond over Teams messages, sharing screen shots of work as necessary; I find

this benefits students who are internal processors. It removes that additional, and unnecessary, anxiety that accompanies a feeling of needing to respond to my prompts immediately; instead, they take the time they need.

Dr. Reyes was always helpful and available outside of class which was much appreciated. (MA386 student)

MA386 Statistical Programming

MA386 introduces students to the computational tools and skills necessary to operate at all stages of the “analysis pipeline.” This course is popular among students seeking a minor in Data Science as well as those in the biological sciences, as it prepares them for working with data in their own projects.

Each of these decisions regarding my course design has been in the pursuit of courses that add flexibility — flexibility that I hope removes the stress to perform in the midst of other demands and gives students space to enjoy the learning.

This is, by far, one of my favorite classes that I have ever taken at Rose. Dr. Reyes was definitely a large part in this class being so enjoyable - his teaching methods, availability for offering help, and general attitude made me feel excited to be engaged in the class...Course policies were clearly oriented to help me learn more than anything else. (MA482 student)

MA482 Biostatistics

The biological sciences often yield data that present unique challenges to analysis. A second course in statistics, **MA482** introduces these challenges and the statistical methods employed to overcome them.

My course design was influenced heavily by [universal design for learning](#) concepts, especially trying to promote accessibility. My syllabi include an infographic cover page that summarizes key policies; un-timed take-home assessments have eliminated testing accommodations; and, video lectures with captions allow students to take in the material at their pace. While I believe all students benefit from these policies, they do require discipline on the part of the student, and not all students respond well to the structure. The primary concern I hear is that students believe they are “teaching themselves” because I do not lecture regularly in class. This is particularly true in the introductory course.

I felt like I was teaching myself this course and had to put so much effort into just figuring out what I’m missing. (MA223 student)

The learning in the class is reliant heavily on the student. (MA223 student)

I design the learning opportunities, but I do not force the students to engage with them, and as a result, I admit that I do lose some students. Yet, I stick with this structure because it allows me to operate out of my strengths. I deliver good lectures, but I do not think I resonate best with students in that format. Especially over the past few years, I have found it challenging to connect with students broadly. Examples from their discipline; stories from those in industry; personal experience; topics in social justice; even self-deprecating humor...these tactics that once drew students in are failing me. As a result, my lectures only reach those who are intrinsically motivated — a small percentage of students. Transitioning away from lecture being at the forefront allows my class to rely heavily on multimedia, tutorials, and assignments crafted to encourage questions. And, I think I am better at constructing these resources than constructing lectures. My course structure provides time for me to engage with students on these assignments through a variety of media that I am very comfortable in (whether in person or on Teams messages, emails, etc.) and allows for ample time to give feedback on those assignments. This feedback is integral to the alternative grading structures that are fundamental to how learning takes place in my courses.

Even though I might have not gotten full credit on an assignment the first time, I was allowed to go back and read the feedback of where I went wrong, and resubmit again for full credit. I very much prefer this class structure because it actually encourages learning through mistakes... (MA223 student)

Essentially, I believe this structure capitalizes on my strengths as a *teacher* and minimizes the impacts of my struggles as an *educator*. One shortcoming that my approach has highlighted is my compulsion to “reinvent the wheel.” In putting together resources for my students, I create things from scratch. I rarely rely on published texts or existing videos. I prefer to control the narrative, and that does take time. I have at times overcome my own ego in this regard; due to the speed at which the content changes, I rely on existing resources for MA386 Statistical Programming. However, I review and update the resources each time I teach the course.

As I consider my path, I would like to improve on how I advise senior capstone experiences. Some of my previous experiences have been amazing, but many more have fallen short of my expectations. In these instances, I have both failed to motivate the student to the benefits of these capstones and to provide the structure necessary to help them succeed (erring on the side of too much flexibility). For the past few months, I have worked with Megan Heyman on redesigning the senior capstone experience for students interested in Statistics. Fall 2024 will be our first time implementing the new structure; however, having approached this as a course design, and with Megan’s strengths in adding structure, I am already certain it will be an improvement.

During the summer of 2020, the Institute recognized the need for a coordinated response to teaching during the pandemic, both through delivering course content in alternate formats but also training faculty to design courses that leverage these modalities. Having taught online and served as our department’s Moodle mentor for a number of years, I was thrilled when Kay C Dee and Ella Ingram asked me to be a mentor for the Creating Adaptable Courses

curriculum and the Y1 course creation efforts heading into the 2020-2021 academic year. We believed in this training effort so much that a group of us authored a book chapter (appearing in *Resilient Pedagogy: Practical Teaching Strategies to Overcome Distance, Disruption, and Distraction*) describing the curriculum for other course designers.

Being a part of the Creating Adaptable Courses curriculum also reminded me how much I enjoy supporting faculty course development. Over the following summers, I became more involved in the Fall Teaching Workshop for incoming faculty. At Ella's invitation, I led a session on backward design during the 2021 Workshop, and I have co-organized the 2022 (with Ella Ingram), 2023 (with Rich House), and 2024 (with Rich House and Aimee Cloutier) workshops. My largest contribution to the workshop has been working with Kay C Dee to transform the "Introduction to Moodle" session into an opportunity for new faculty to begin developing their course Moodle pages alongside senior faculty with whom they will be co-teaching. This experience can be rewarding to both incoming faculty (grateful to begin course prep) and senior faculty (integrating fresh perspectives of the new faculty). This is an example of where the *design*, not the implementation, is where I have had an impact. During the session, I answer a few questions, but I mostly just watch the magic happen.

Operating from My Strengths

While I have struggled to motivate students, I am at my best when designing the course. Those designs play to my strengths in remote engagement, but they are driven by flexibility.

2 Being Infected by the Curiosity of Others

I'll work hard I'll do my part; You won't hear me complain; I'll never go down easy; I swear I'll pull my weight. (Sawyer Brown)¹

I attended graduate school intent on entering industry; the primary reason I did not initially consider academia was my aversion to “research.” In general, I have struggled to find the drive required to plan and execute an agenda from idea through publication. Two examples illustrate this. Suppose we are interested in determining which characteristics recorded in a patient’s medical chart (potential predictors) are associated with experiencing a heart attack (the response); however, we might only have the patient’s family history for a subset of the study participants. Separating the characteristics associated with a response from those that are not is a process known as variable selection; and, as described in our example, we might be interested in doing this in the presence of missing data. For a number of years, I have nursed an idea of a general approach to this problem that merges techniques developed concurrently in separate areas of statistics. Several years ago, I even advised a senior capstone (Cody Roberts, 2015) in this area with promising results. However, I have not pursued the project, continuing instead to prioritize revisions to class materials or the development of new courses (or really any other work). During the 2022-2023 academic year, upon advice from a colleague, I reviewed the literature on how alternative grading can improve equity in the classroom. A student (Clara Place, expected 2025) helped me conduct a survey to better understand the experiences of historically underrepresented students with alternative grading at Rose-Hulman. I completed the paper, but it was rejected from the target journal; and, it has just sat since, me prioritizing day-to-day work.

While I have not developed a research agenda, I have remained active. We should expect faculty to continue to grow intellectually; for me, this growth is fueled by the curiosity of others. The most appealing aspect of Statistics for me has always been the ability to collaborate with researchers across a variety of disciplines. As an applied statistician, my passion is joining such collaborations, particularly in the biological sciences. The development of an appropriate analysis plan, the implementation of the analysis, and the communication of the results, all in the service of advancing the research being led by others is where I perform best. These opportunities invigorate me, enrich my classroom, have meaningful impacts, and contribute to my growth as a scholar.

¹From *The Nebraska Song* by Sawyer Brown. As I am sure my Department Head and others will attest, I am still working on the “not complaining” part!

! My Professional Mission as a Collaborator

To *collaborate* with researchers who want to make a difference.

i Note

As I am both a statistician and a professor, and my collaborations over the years have resulted in growth in both realms.

I am a huge proponent of alternative grading strategies² and could talk about them for hours³. Over the past several years, I have engaged in several opportunities to share my experience with others. This has included two workshops for Rose-Hulman faculty (the first co-led with John Mirth, the second co-led with Sylvia Carlisle), two invited contributions to the [Statistics Teaching and Learning Corner](#), a conference presentation with several Rose-Hulman colleagues (Emma Dosmar, Julia Williams, Rich House, and Sylvia Carlisle), and a wonderful collaboration with educators from several universities (Brenna Curley of Moravian University, Jillian Downey of Gustavus Adolphus College, Katherine M. Kinnaird of U.S. Air Force Academy and Smith College, and Adam Loy of Carleton College). This latest collaboration has resulted in a publication in the [Journal for Statistics and Data Science Education](#) and a workshop at the [US Conference on Teaching Statistics](#).

Through each of these experiences, the colleagues I have worked with have helped me refine my approach to grading. In fact, the regular meetings with my latest collaborators have become a high point in my schedule, providing a source of energy for tackling the difficult parts of teaching. These conversations have been so fruitful and so cathartic to each of us that our latest venture is launching a podcast for educators where we “talk through teaching tensions together” in an effort to share the various experiences educators have in tackling daily challenges in education like navigating the use of technology in the classroom. It was a great joy to see our hard work recognized in the acceptance of our paper; but, the greater joy (being the “senior” member of the group) was watching all four of my colleagues receive positive tenure decisions following its acceptance.

In addition to my position at Rose-Hulman, I hold the position of Adjunct Clinical Assistant Professor of Biostatistics & Health Data Science through Indiana University. This position supports my work with the Terre Haute branch of the Indiana University School of Medicine, which houses the [rural health scholarly concentration](#). Through this curriculum, medical students interested in practicing in rural areas gain valuable research skills by leading a research project in the Terre Haute community. The final deliverable for the project is a manuscript suitable for submission to a journal targeting rural medicine, and it provides an excellent topic of conversation during the students’ interviews for residency.

²I have documented several of my experiences on my [personal site](#) in hopes of benefiting others.

³On a recent road trip, my wife, an adjunct in our department, and I spent 8+ hours talking about grading!

The majority of projects conducted by medical students in this curriculum depend on surveying members of the community. Given the often limited statistical background of the medical students, the directors of the program (Robin Danek and Ellen Ireland) invited me to collaborate on these projects. My role on the team is to provide statistical expertise during the design of the survey, the development of an analysis plan, and in reporting the data. As a true collaborator, I am involved from the early stages of the project review. Through these projects, I have learned a lot about the challenges facing rural communities in regards to access to healthcare. I brought this experience back to Rose-Hulman when Jessica Livingston and I developed the [Social Justice and Statistical Concepts course](#). Being a part of the survey development and data analysis also provides rich contexts for the Biostatistics course. Specifically, my email exchanges with medical students have inspired a set of assignments asking students to use the course material to explain to medical students (in a language they will understand) why more complex analyses (than those learned in an introductory course) are needed to address their question of interest. Students often find these to be the most challenging assignments of the course. As they are led by medical students, these collaborations do not always result in publication; the project may end with their presentation to their peers. Small sample sizes often limit our analyses to graphical summaries; as we allow the medical students to take the lead when possible, this often means guiding them through choosing an appropriate way to summarize their data and the selection of appropriate software. However, other projects have been very successful, and these typically require more advanced analyses, beyond the capabilities of the student. In such cases, my role is to determine an analysis that addresses the primary research question and explain it and the results in a such a way that the medical student feels confident explaining it in their interviews.

In addition to working with the medical students, Robin and I have also collaborated on a paper investigating the impact of gender on the differences in mental health treatment between patients in rural and urban communities. We are currently working on revisions for inclusion in the [Community Mental Health Journal](#); however, this project has already been beneficial to me. Through the project, I gained familiarity with the [National Survey on Drug Use and Health](#); this survey formed the basis of a senior capstone experience for a Biomathematics student, and it should make an excellent source for exploring questions in future senior capstones as well.

Operating as Part of a Team

While I continue to struggle with the false imagery of a researcher as a lone wolf, I have learned that I work best when I am a member of a team, inspired by the natural curiosity of my colleagues.

3 Relieving their Burden while Advancing their Vision

People may not remember exactly what you did, or what you said, but they will always remember how you made them feel. (Williams)¹

Like many other new faculty, my service was initially defined by others; I served on the committees to which I was assigned, and I volunteered in my department when asked. I have come to believe that this view of “service” — an obligation to be fulfilled — leads only to faculty burn-out. When we serve in ways that make use of our particular gifts, we are more likely to find the role fulfilling, and it is ultimately more beneficial to the Institute. This does not mean that I never experience frustration in my service roles, and there will always be jobs that need to be done; just as there are bad days in the classroom, service can be draining. However, as I have learned to say “yes” to opportunities that complement my skillset, I have found service to be less burdensome and more rewarding.

I think my involvement with the Rose Show best encapsulates my perspective on service. Ashley Bernal is passionate about providing a space for students from all disciplines to showcase their work. She is the heart of the event. As a part of the planning committee for the Rose Show, my focus has been streamlining some administrative tasks so that Ashley can focus on the layout and the overall vision for the event. I moved the registration process to Moodle so we could capture information about each team automatically and all members of the planning team had access to the information; the electronic registration also allows us to automate the construction of the physical and [online programs](#). When Ashley had a vision for the [Innovation Award](#), I worked to put a system in place to collect video submissions from participants wishing to be considered. At each step, my goal has been to support Ashley’s vision for the event while operating out of my strengths.

! My Professional Mission as a Servant

To *serve* in roles where my administrative skills support the work of others.

My time on the Faculty Affairs Committee was interesting to say the least. During the Fall of my first year, the Board removed the President. Following the news, the faculty called a special meeting to discuss whether the board should forgo a national search in favor of appointing

¹Appearing in a news article by Bill Williams, adapting a quote from Carl W. Buehner, often misattributed to Maya Angelou

Rob Coons as president. Following the meeting, the chair of the Faculty Affairs Committee (Rebecca Dyer) and the Faculty Representative to the Board (Christine Buckley) met to draft a letter to the Board summarizing the faculty perspective. As I had volunteered to take notes during the meeting, I was present as they drafted the letter. I watched as these colleagues managed to succinctly summarize the varied thoughts of the faculty in a powerful endorsement to the board. I am proud to have played a small role in that letter, and I am fortunate to have seen a wonderful example of their setting aside personal opinions in service to their role as a representative of the broader faculty. As a member of Faculty Affairs, my primary contribution that year was taking point on drafting language for the Faculty Handbook to revise our policy on timing for tenure following family and medical leaves. The revisions were not mine; my role was to create language that both reflected the thoughts of faculty who saw the need for change and could be operationalized by the Department Heads who act as the first point of contact in these cases. I synthesized the ideas of others for the benefit of the larger community. I would learn this lesson again at the end of the year as we saw another administrative transition. Serving on the search committee for the Provost and Vice President of Academic Affairs, our task was not to provide our opinions on the next Provost but to summarize the qualifications of the candidates and the thoughts of the faculty to aid in the President's decision.

Believing that first year would be difficult to top, I served as chair of Faculty Affairs during the Winter and Spring terms of the 2019-2020 academic year. The examples I had seen of acting as a representative in that first year would prove to be useful as the Institute shifted to accommodate the COVID pandemic. The spring saw a shift to remote learning, and with that came apprehension about student well-being in the midst of both the pandemic and a new paradigm for learning. As a committee, our greatest accomplishment was passing a measure to allow students to take courses as pass/fail during the Spring term. It is rare to see such agreement in the faculty, and I can take no credit. My job was to steward the wonderful team we had and the ideas they generated. They put forward several options, and we needed to find new ways to disseminate those options and gather faculty input. We built a Teams site for the committee and developed a Moodle page for disseminating information to all faculty (both of which are still used today).

My third year on Faculty Affairs, I served as co-chair. People mistakenly believe chairing during the Spring of 2020 was difficult, but I maintain that Simon Jones had a more difficult job chairing during the 2020-2021 academic year. The unity we felt during the Spring of 2020 was much more tenuous during the following year. As the pandemic became more endemic, the variability in faculty opinions grew. Simon did a phenomenal job of leading us through that year. What I could offer was support. Amidst the discussions on our pandemic response, Simon and I were charged with drafting language for a “Professor of Practice” position to support a group of colleagues who did not fit into the traditional tenure-track line. In drafting this language, we did not start from scratch; we synthesized what we saw at other universities in a way that addressed the needs of our Institute. While I was not a part of Faculty Affairs the following year, I hope the document we produced was helpful to those who crafted what eventually became the “Reoccurring Appointment.”

I have recently completed a term as the Faculty Representative to the Board of Trustees. The Faculty Handbook says almost nothing about this role, and that lack of clarity led to a lot of misunderstanding among faculty, the President, and the Board. Building on work started the previous year (when Adam Nolte was the Faculty Representative), Ashley Bernal, Scott Tieken, and I worked with President Coons to draft a document that operationalized the description in the Faculty Handbook. It provides clarity on the actual duties of the representatives in communicating with the President and the Board of Trustees and sets out agreed upon timelines for conducting the annual climate survey. The annual survey was both the part where I felt most at ease and the most emotionally draining. While we perceive student comments to be brutal, faculty comments can be demoralizing. What I enjoyed was not reading through the comments but finding ways to condense them down to meaningful feedback for the Cabinet and the Board. Like Faculty Affairs, my time in this position provided an entirely different perspective on the Institute. It was a joy to stand before the board and showcase the hidden stories of what faculty do on a regular basis to make Rose a success. At the same time, balancing those stories to the Board while simultaneously clearly expressing concerns felt by faculty to the Cabinet was extremely challenging. I still worry about whether my responses to the Board clearly communicated the broader faculty sentiment.

While I leveraged my gifts in choosing how to serve on Faculty Affairs and as the Faculty Representative, both positions were elected. Where I have had more freedom in designing my service on campus has been through assessment. Since the Fall of 2019, I have been our departmental representative to the Committee for the Assessment of Student Outcomes. When I joined, the committee was in the midst of crafting the rubrics for the [Institute Student Learning Outcomes](#). I quickly learned that assessment offers an opportunity to ask the “big questions” that I enjoy discussing (like what does it mean to “collaborate”; and, do we teach critical thinking or do we teach discipline skills and expect critical thinking to develop as a by-product?). As the representative to CASO, it was natural for me to serve on our departmental committee (with Kenji Kozai, Manda Riehl, Josh Holden, and Bill Butske) in drafting program learning outcomes for Mathematics. As our program is not accredited by an external agency (like ABET), our department did not have an assessment plan in place. Once the department had approved an assessment plan, I agreed to chair the [Mathematics Assessment Group for Program Improvement](#), our department’s committee for overseeing program assessment. My administrative skills helped to create a repository for our process, including the collection of artifacts, but the real work has been (alongside team members David Finn and Rachel Petrik) synthesizing the many varied opinions within our department to create actionable steps to improve the assessment of the program.

One area where we could improve as a faculty body, myself included, is transition. We serve in positions and then move on, often leaving the individuals who rotate into those positions no direction. In many instances, the Faculty Handbook provides little guidance on navigating a specific role. I am concerned this exacerbates faculty burn-out; it might signal the role, or the individual, has such little importance that we are unwilling to provide adequate support. Despite recognizing this, I have been slow to improve how I handle transitions. As the outgoing chair of Faculty Affairs, I created a transition document for the next chair, outlining key

dates to keep in mind, initiatives we had not yet completed, and notes about some of the unanticipated responsibilities. A similar document for the Faculty Representative to the Board position described my thoughts on the position and navigating the vague nature of the position. Helping one another enter a position should be a part of our service, as should knowing when to step aside.

In deciding whether to seek a promotion, I surveyed colleagues on my strengths and areas of needed improvement. The most common advice I received was that I am over-extended. Of course, that could be the polite way of conveying the other concern that was communicated to me through other channels: I have an ego. If we believe we are the only one who has a solution, we are bound to seek the spotlight; I am still learning how to step aside. Within our department, my primary area of service for a number of years involved the registration system for the High School Math Contest. I jumped into that position because I saw the burden it was taking on our administrative assistant at the time, and I thought there had to be an easier way. I did what I could to streamline the process by using an online tool for collecting registrations electronically and writing a program to process changes to the registration quickly so that we could create answer sheets for participants the morning of the competition. My stepping out of that role allowed someone else (Kyle Claassen) to elevate that platform to a level that I could not have accomplished. I needed to let go so that someone else could use their skills to their fullest potential; I could stand to do that more often.

Operating in Places that Complement My Interests and Gifts

I am learning to align my service with my interests and gifts, which requires me to remind myself regularly that I am not the best person for every job. I define success not by whether someone is aware of my actions, but whether those I served, or served alongside, experienced a moment of calm because their burden was a little lighter.

4 What's In a Name?

Your identity is your most valuable possession. Protect it. (The Incredibles)¹

While I have not had the responsibility of reviewing portfolios requesting a promotion to Full Professor, I anticipate that my portfolio may have had a different tone and emphasis than others, particularly those from the Department of Mathematics. The achievements of my departmental colleagues speak volumes about their commitment to their respective specialties within Mathematics. My advanced degrees are in Statistics; I teach Statistics courses, apply statistical methods to advance the research of others, collaborate and serve within the Statistics Education community, and I am a member of the American Statistical Association. I am a Statistician who is housed in the Department of Mathematics.² I note the distinction because it so often impacts my perspectives on academic life, and by extension, the nature of this portfolio.

Every member of the faculty contributes a unique perspective and skillset to the Institute. This portfolio was my honest reflection on how I fit within that larger body, including the strengths and weaknesses I contribute. I will probably always fall short of the professor I envision I should be, but I hope my path will continue to serve the Institute well.

I appreciate your consideration of this portfolio.

¹Holly Hunter as Helen Parr (Elastigirl) in *The Incredibles*.

²While not universally settled, the majority of statisticians view Statistics as a discipline that, while relying heavily on Mathematics, is distinct from Mathematics. As examples, the [article by Tran and Lee](#) and the [article by Moore and Cobb](#) illustrate the differences.

A Curriculum Vitae

Eric M. Reyes

Associate Professor | Statistician

CONTACT INFORMATION

Eric Reyes
Associate Professor
5500 Wabash Ave
Rose-Hulman Institute of Technology
Department of Mathematics
Terre Haute, IN 47803

Phone: 812.877.8287
Email: reyesem@rose-hulman.edu

EDUCATION

Ph.D. in Statistics (2012)

- North Carolina State University, Raleigh NC
- Dissertation Title: *Complete Least Squares: A New Variable Screening and Selection Method*
 - Advisors: Dennis Boos and Len Stefanski

Master of Statistics (2008)

- North Carolina State University, Raleigh NC
- Concentration: Biomedical Statistics

B.S. in Mathematics and Economics (Summa Cum Laude, 2006)

Rose-Hulman Institute of Technology, Terre Haute IN

ACADEMIC EXPERIENCE

Associate Professor | August 2018 – Present

- Rose-Hulman Institute of Technology, Terre Haute IN
Department of Mathematics
- Teach lower- and upper-level statistics courses
 - Direct senior capstone experiences in statistics

Adjunct Clinical Assistant Professor of Biostatistics & Health Data Science | November 2023 – Present

- Indiana University School of Medicine at IUSM – Terre Haute, Terre Haute IN
- Contribute to an annual Journal Club with medical students
 - Collaborate on community health projects

Assistant Professor | August 2012 – August 2018

- Rose-Hulman Institute of Technology, Terre Haute IN
Department of Mathematics

COMPUTING SKILLS**Teaching Assistant | January 2008 – August 2008**

North Carolina State University, Raleigh NC

Department of Statistics

- Full teaching responsibility for an introductory statistics course

Expertise: R, RMarkdown/Quarto, Moodle

Competency: SAS, Stan, Microsoft Office, Panopto, HTML, CSS

UNDERGRADUATE COURSES TAUGHT

Engineering Statistics I (Multiple Terms Yearly)

Engineering Statistics II (Last Taught: Fall 2013)

Probability (Last Taught: Winter 2023)

Introduction to Statistics with Probability (Last Taught: Fall 2023)

Statistical Programming (Last Taught: Fall 2022)

Mathematical Statistics (Last Taught: Winter 2018)

Biostatistics (Last Taught: Spring 2024)

Bayesian Data Analysis (Last Taught: Winter 2023)

Applied Regression (Last Taught: Winter 2015)

Social Justice and Statistics Seminar (Last Taught: Winter 2021)

Social Justice and Statistical Concepts (Last Taught: Winter 2022)

RESEARCH INTERESTS

Alternate assessment techniques

Statistics education

Applications of statistics to the biological sciences

**CONSULTING
EXPERIENCE****Statistical Reviewer for Student Research | May 2018 – Present**

Indiana University School of Medicine, Terre Haute

- Review student research proposals
- Collaborate in the development of data collection protocol
- Collaborate in the development of the statistical analysis plan
- Review manuscript drafts

Independent Consultant | Summer 2021

McGraw Hill

- Create video solutions for Schaum's Probability Outline

Statistical Consultant | Fall 2019

InterVarsity Christian Fellowship, Remote Sabbatical

- Identify predictors of chapter closure
- Identify characteristics associated with InterVarsity presence
- Present recommendations for growth initiatives

Statistical Consultant | November 2015 – August 2019

Joint Replacement Surgeons of Indiana, Rose-Hulman Lab

- Statistical consulting with biomedical engineers
- Analysis of clinical datasets collected at the JRSI lab at RHIT
- Analytical techniques: mixed effects models and estimations through generalized estimating equations for repeated measures
- Author statistical sections for articles and abstracts

Independent Consultant | August 2013 – August 2014

John Wiley & Sons, Inc., Higher Education

- Create video lectures on statistical concepts to be included with a textbook

Statistical Consultant | February 2012 – December 2012

Duke Clinical Research Institute

Clinical Trial Statistics, via Kelley Services

- Statistical collaboration with clinicians and statisticians
- Analysis of clinical datasets
- Analytical techniques: survival analysis, propensity scores, predictive modeling
- Author statistical sections for articles and abstracts

Intern, Secondary Manuscripts | September 2006 – December 2011

Duke Clinical Research Institute

Clinical Trial Statistics

- Statistical collaboration with clinicians and statisticians

GRANTS

Introducing Water Footprints in a Statistics Course
Rose-Hulman Sustainability Network (AY 2023-2024)

Member: American Statistical Association
Graduate School: Charlie Sampson Poster Award Winner (MBSW 2010)
Graduate School: Trainee in NHLBI Integrated Biostatistical Training Program for CVD Research
Undergraduate: Mu Sigma Rho

SERVICE ACTIVITIES

Departmental Service
Chair: Mathematics Group for Program Improvement (AY 21-22, 22-23, 23-24)
Convener: Statistics and Operations Research Curriculum Group (AY 14-15, 15-16, 16-17, 17-18)
Advisor: Area Minor in Statistics (AY 15-16, 16-17, 17-18, 18-19, 19-20, 20-21, 21-22, 22-23, 23-24)
Member: Curriculum Review Committee (AY 23-24)
Member: Department Assessment Group (AY 19-20, 20-21)
Member: Data Science Curriculum Core Group (AY 15-16, 16-17, 17-18)
Member: Undergraduate Math Conference Committee (AY 14-15, 15-16, 16-17, 17-18, 18-19)
Member: Department Hiring Committee (AY 15-16)
Registration: High School Math Contest (AY 15-16, 16-17, 17-18, 18-19, 21-22, 22-23)

Institutional Service

Member: Academic Affairs Faculty Representative to the Board of Trustees (AY 22-23, 23-24)

Member: Planning Committee for Rose Show (AY 20-21, 21-22, 22-23, 23-24)

Member: Moodle Mentors (AY 17-18, 18-19, 19-20, 20-21, 21-22, 22-23, 23-24)

Member: Committee on Animal Care and Use (AY 15-16, 16-17, 17-18, 18-19, 19-20, 20-21, 21-22, 22-23, 23-24)

Member: CASO (AY 19-20, 20-21, 21-22, 22-23, 23-24)

Co-Coordinator: Teaching Workshop (Summer 2022, Summer 2023, Summer 2024)

Member: Innovation by Design, Alternative Program Actions Team (AY 24-25, 25-26)

Member: Tier 2 Strategic Plan Design Team: Affordability and Value (Spring 2023)

Coordinator: Peak Performing Professors Reading Group (AY 21-22)

Member: MA Department Head Search Consultants (AY 21-22)

Member: HSSA Economics Hiring Committee (AY 21-22)

Member: Peer Mentor for CAC and Y1 Course Development (AY 20-21)

Member: Faculty Affairs Committee (AY 18-19, 19-20, 20-21)

Chair: Faculty Affairs Committee (AY 19-20)

Member: Quality of Education Committee (AY 13-14, 14-15, 17-18)

Member: Subcommittee on Academic Misconduct (AY 14-15)

Faculty Advisor: Lilly Scholars Network (AY 18-19, 19-20)

Faculty Advisor: InterVarsity Christian Fellowship

Professional Service

Member: Planning Committee for USCOTS (2021)

Website Maintainer: Isolated Statisticians (Dec 2017 – Present)

Reviewer: Rose-Hulman Undergraduate Mathematics Journal (occasionally)

Reviewer: Journal for Statistics and Data Science Education (annually)

Member: ASA-MAA Joint Committee on Statistics Education (Jan 2016 – Dec 2019)

B Faculty Activity Reports

FACULTY ACTIVITY REPORT 2013

Rose-Hulman Institute of Technology

Name: Eric Reyes

Title: Assistant Professor of Mathematics

TEACHING, STUDENT ADVISING AND CURRICULUM DEVELOPMENT

COURSES TAUGHT

<u>Quarter</u>	<u>Course Name and Number</u>	<u>Enrollment</u>
201310	MA223-01 Engineering Statistics I	28
	MA223-02 Engineering Statistics I	29
201320	MA223-03 Engineering Statistics I	25
	MA223-04 Engineering Statistics I	28
201330	MA481-01 Mathematical Statistics	5
	MA223-01 Engineering Statistics I	12
	MA223-02 Engineering Statistics I	25
	MA482-01 Bioengineering Statistics	10
201340	MA494-03 Senior Project III	1
	MA223-01 Engineering Statistics I	14

COURSE DEVELOPMENT

COURSE

Developed MA482 (Bioengineering Statistics) to include 80% new material comprised of 4 new units (nonlinear modeling, survival analysis, missing data methods, and causal inference); this adds a great deal of breadth to the course for ABBE students (the primary audience, for which the class is cross-listed). Each unit consisted of a capstone case study, for which students were asked to apply the methods to a real-world dataset and then write a report detailing their methodology and conclusions. Each unit concluded with a webinar led by off-campus guest lecturers (from pharmaceutical and academic research companies).

Reworded the course learning objectives for MA223 to make use of current recommendations for well written learning objectives. Specifically, the objectives have been written to indicate to students how they will be assessed on each objective, and have been connected to sections within the newly adopted text.

ADVISING

OTHER

Advisee Count: 1

Advised Devon Hardman (MA) on her mathematics senior project. We received data from BD Technologies (Research Triangle Park, NC) involving results from a cell culturing study. Devon applied non-linear modeling techniques to develop a model for cell growth. This represented a new application of this methodology that greatly improved upon the standard in the field. Devon's results were received well by the company.

Devon presented her results at the Rose-Hulman Undergraduate Mathematics Conference. Devon also presented her results in a poster session of the Midwest Biopharmaceutical Statistics Workshop (Muncie, IN) in May, which is attended by major pharmaceutical companies in the area.

Devon's final report received an honorable mention in the CAUSE Undergraduate Research Project competition, a national competition for research in statistics conducted by undergraduates.

THESIS ADVISEES

Advisee Count: 1

Committee Member for Cody Austin, Master's thesis for Biomedical Engineering titled "The Effect of Loading Orientation on the Structural Properties of the Anterior Cruciate Ligament." Cody received the award for Most Outstanding Master's Thesis.

THESIS ADVISEES

Advisee Count: 1

Committee Member for Brian Sutterer, Master's thesis for Biomedical Engineering. Advising Brian on the design of the clinical trial and analysis of resulting data. The data are part of his senior thesis.

PROFESSIONAL DEVELOPMENT ACTIVITIES

PROFESSIONAL DEVELOPMENT

PUBLICATIONS

BOOKS PUBLISHED

Cardiac Catheterization and Interventional Cardiology Self-Assessment Program

Lead author for "Chapter 17.1: Basic Statistics and Analysis for the Interventional Cardiologist." This book is sponsored by the American College of Cardiology.

Understanding Clinical Research

Lead author for "Chapter 15: Analytical Methods of Addressing Confounding." pg 209-226. Editors: Renato Lopes and Robert Harrington. This text was used as the foundation for the last unit in the MA482 (Bioengineering Statistics) course.

PAPERS PUBLISHED

Bayesian Average Error Based Approach to Sample Size Calculations for Hypothesis Testing, Journal of Biopharmaceutical Statistics

This methodology has applications to designing biomedical studies, similar to those discussed in MA482 (Bioengineering Statistics).

Reduction in First and Recurrent Cardiovascular Events with Ticagrelor Compared with Clopidogrel in the PLATO study., Circulation

Lead statistician on clinical paper. This was consulting work I did for Duke Clinical Research Institute. This paper was discussed in a webinar in MA482 (Bioengineering Statistics).

PAPERS SUBMITTED

Tutorial: Survival Estimation for Cox Regression Models with Time-Varying Coefficients Using SAS and R., Journal of Statistical Software

SEMINARS

CONFERENCE PRESENTATION

Engineering a Statistical Model: An Activity for an Engineering Statistics Course, US Conference on Teaching Statistics

I presented an active-learning activity I developed for MA223 (Engineering Statistics I) that highlights the application of statistics to engineering modeling. The activity is based on an example in ES201 (Conservation and Accounting Principles).

CONFERENCES ATTENDED

Attended RHIT, Mathematical Association of AmericaRose-Hulman Undergraduate Mathematics Conference

Advised Devon Hardman's senior project, which was presented at this conference.

Attended OTHER, American Statistical AssociationMidwest Biopharmaceutical Statistics Workshop

Advised Devon Hardman's senior project, which was presented at a poster presentation at the conference.

OTHER

COURSE PARTICIPATION

Survival Analysis for Multiple Endpoints

Short course offered during Midwest Biopharmaceutical Statistics Workshop.

OTHER

Data to Decisions: A Video Series for Enhancing Engineering Statistics, RHIT Multi-Media Grant

The grant supported the development of five 40-minute videos that each explore a case study. The case studies cover the five primary applications of statistics discussed in MA223 (Engineering Statistics I). The videos act as a capstone review for the course and allow students to review material for which MA223 is a pre-requisite. In addition, an interactive online lab was developed to aid in review toward the end of the course.

NON FUNDED RESEARCH

Complete Least Squares with Applications to Variable Screening

Developed a new statistical estimation method for linear regression. This method allows estimates to be constructed for high-dimensional big data (when there are more factors than subjects). This estimation method was applied to develop a new method of screening out unimportant variables prior to the application of a variable selection method. That is, this aids in determining which factors are important for predicting a given response in linear regression. Draft in progress.

RESEARCH PROFILE

Scholarship statistics, variable selection
Subject

Study Area I am interested in the application of statistics to medicine. In particular, I focus on variable selection - determining which factors (variables) are associated with a particular response. I am investigating a new method for variable selection in the presence of missing data, as well as variable screening prior to variable selection when the number of factors exceeds the sample size.

General Comments

Family Medical Leave during Winter Term (AY 2013-2014)

COURSE DEVELOPMENT

COURSE

A new module, representing a change to 20% of the content, was added to MA482/BE482 Bioengineering Statistics to introduce statistical models for repeated measures data. On multiple occasions, students in other departments have brought analysis problems to my attention involving repeated measures, which was not currently covered in any of our courses. As this setting occurs often in biomedical applications, it seemed appropriate to introduce the material in Bioengineering Statistics.

ADVISING

OTHER

Advisee Count: 3

Advised Kimberly Boucher (MA) on her mathematics senior thesis during the Fall and Winter terms. This project was not completed; Kimberly accepted a position prior to graduating and has yet to complete the requirements for graduation (her senior thesis).

Advised Garrett Meyer (ME) regarding the analysis of various data gathered during the assessment of the Human Powered Vehicle design. The analyses were used to consider improvements to the design prior to competition.

Conducted an analysis on behalf of Ali Almajed (CSSE) describing the distribution of image characteristics. This was used in his senior project developing a method of classifying images taken during sunset.

THESIS ADVISEES

Advisee Count: 1
Committee Member for Brian Sutterer, Master's thesis for Biomedical Engineering titled "An Investigation of the Relationship Between Plantar Weight Distribution and the Condition of Osteoarthritic Knees During Quiet Standing."

COURSE DEVELOPMENT

COURSE

Bayesian Statistics is a new course to Rose-Hulman. This course was developed for two reasons: (a) it fills a large gap in our statistics curriculum which currently only includes the Frequentist perspective and (b) it can potentially reach students who are not ordinarily exposed to statistical thinking but have a strong background in probability, such as computer science majors.

MA481 was revised so that 30% of the course content was computer simulation. It has become evident in the statistical community that students studying statistics need exposure to theory, practical application, and computational skills. The mathematical statistics course, primarily a proof-based course in the past, was revised to include statistical simulation as a means of both analysis and demonstrating statistical properties such as convergence.

MA223 was placed online during the summer. The content of the course was distributed through videos. Videos were developed for each of the modules of the course. The notes were reformatted to align with the video content. A new template was constructed for integrating random questions with statistical content into the Moodle environment. Over 300 hours of work went into developing the course. The material will be used for flipping courses in the upcoming academic year.

ADVISING

ACADEMIC ADVISEES

Advisee Count: 3

Advisor for mathematics majors with a concentration in statistics. While not the advisor of record for each student; these students are encouraged to discuss future career/graduate school plans with me.

WORKSHOPS PRESENTED

Engaging Intro Statistics Students with Activities

In conjunction with Diane Evans (Rose-Hulman), we were invited by Minitab to lead this workshop at the US Conference on Teaching Statistics. We introduced the 64 participating faculty to several activities we have developed at Rose-Hulman for MA223 Engineering Statistics I.

OTHER

COURSE PARTICIPATION

Winter 2014 Faculty Cohort for Online Course Development

Faculty member successfully completed 20 hours of training from the Learning and Technology Department on developing online courses

NON FUNDED RESEARCH

Nonlinear Modeling Framework for Estimating Young's Modulus from Stress-Strain Curves

Lorena Maxwell (2015) worked on this for her senior project. I hope to continue this project in future years. Our end goal is to construct an online program that will enable the Biomedical Engineering department explain the computation of Young's Modulus from stress-strain data and also provide an automated method for its computation.

Unified Approach to Variable Selection in the Presence of Missing Data

Cody Roberts (2015) worked on this for his senior thesis. This research presents a way of determining which potential predictors are useful for predicting a response and which are not when those predictors are not fully observed on all subjects. This research addresses an open question in statistics and would be very beneficial to medical applications of statistical modeling.

RESEARCH PROFILE

General Comments

CSSE Senior Thesis was Wenjun Kong, who is interested in pursuing a graduate work in bioinformatics; so, we felt a statistics-oriented thesis was appropriate.

COURSE DEVELOPMENT

COURSE

MA386 Statistical Programming has traditionally been part R and part SAS. This year, it was revised to be an all R course. This allowed us to cover more advanced topics and introduce data-science elements into the course.

MA223 is a course of mass instruction; typically, this means that the course syllabus and final exam are coordinated across all sections. In the Fall and Winter terms, we expanded upon this. All instructors in these two terms implemented a flipped classroom. Lectures were delivered online using videos, which I had recorded for teaching MA223 online during the summer following AY1415. All instructors used the same videos. Homework assignments, in-class activities, and exam topics were coordinated across all sections as well. This presented a unified course to these students. I acted as the coordinator for these sections both terms.

MA482 was graded using specifications grading. This was a large undertaking in setting up a system in which students were aware of what assignments needed to be completed to obtain a specific grade.

ADVISING

ACADEMIC ADVISEES

Advisee Count: 2

Advisees that were originally Leanne Holder's or Al Holder's advisees prior to their sabbatical.

Advisee Count: 12

Advisor for area minor in Statistics.

STUDENT ORG ADVISEES

Advisee Count: 50

Faculty advisor for InterVarsity Christian Fellowship.

THESIS ADVISEES

Advisee Count: 3

Advised Wenjun Kong (CS) on her senior thesis. Wenjun, wanting to pursue a career in Bioinformatics, decided to conduct a senior thesis with a primary emphasis in statistics. Her computing skills were used to develop code to implement her approach and conduct simulation studies assessing the methodology. Advised Amy Kamperman (MA/ECON) on the math portion of her senior project. Began advising Xiaomo Wang (MA) on her math senior thesis; she wanted to begin her work one term early.

Advisee Count: 1

Committee member for Christine Rollins Master's thesis. Topic is currently undecided, and it is in the early stages.

COURSE DEVELOPMENT

COURSE

This was the second time I offered the Bayesian Data Analysis course as a special topics course within the department. I updated the course dramatically to have a more applied feel than the more theoretical offering previously. The course was well received and the department voted to put it in the course catalog.

DEPARTMENT CURRICULUM REVISIONS

Dr. Megan Heyman and I developed a new curriculum for the introductory statistics (MA223) course. We piloted various components of the new curriculum throughout the year. The new curriculum has a heavier focus on data collection and study design; we also included a new unit on randomized complete block design. The course also has a stronger modeling component.

We spoke with members from each department whose students take MA223 to discuss the changes in the course. The curriculum changes were approved by the department and curriculum committee in May 2018.

ADVISING

ACADEMIC ADVISEES

Advisee Count: 5

Advisor for the statistics minor.

STUDENT ORG ADVISEES

Advisee Count: 125

Faculty advisor for InterVarsity Christian Fellowship

Advisee Count: 25

Faculty advisor for Lilly Scholars Network (new this year).

THESIS ADVISEES

Advisee Count: 2

John Lambrecht: deep learning boasts that with enough data, it can uncover any underlying pattern. This could potentially cause problems when constructing models if the deep learning models can begin to pick up on the pseudo-random number generator used when performing cross-validation during fitting. This would lead to the deep learning models having optimistic performance metrics. John is investigating whether this is a valid concern in practice.

Ty Adams: selecting the variables which are important to the data generating process is a difficult problem; one complication is the need to specify the form of the relationship. Ty is using the distance correlation measure as a means of developing a non-parametric variable selection algorithm.

Both intend to graduate early next year.

CONFERENCE PRESENTATION

Introducing Data Science Elements through Parallel Courses in Statistics and Computing, Electronic Conference on Teaching Statistics

Webinar with Dr. Megan Heyman.

Abstract:

In the fall of 2017, Rose-Hulman Mathematics and Computer Science departments jointly launched a minor in Data Science. The popularity of the minor has already resulted in increased enrollment in required statistics electives. Specifically, all students receiving the minor take an introductory course in statistics. With the constraints of the minor, many students also elect to take a course which emphasizes statistical programming. Both the introductory course and the statistical programming course are offered only in the fall. In order to support the new minor, we have aligned these courses to provide a strong Data Science foundation for students electing to take both concurrently. Changes we have made to the courses include assignments and lectures incorporating open-ended questions, increased group work, intensive programming, and data analysis projects. In this session we will highlight these changes as well as discuss how the structures support statistical and computational thinking and communication. Participants will be asked to begin developing a project that could be offered in a future iteration of their course.

Is the Central Limit Theorem Still Central to the Introductory Course?, Electronic Conference on Teaching Statistics

Round-table discussion on a major component of the introductory course.

Abstract:

A traditional curriculum for an introductory statistics course builds up to the Central Limit Theorem as a model for the sampling distribution. The remainder of the course flows out of this theorem using it to develop and/or motivate inferential methods. As more instructors move toward randomization-based inference, incorporating more data visualization elements, and emphasizing computational thinking, we ask the question: is the Central Limit Theorem still central to the introductory course? In addition to sharing how sampling distributions are motivated in their own classes, the group will wrestle with questions like is the Central Limit Theorem helpful for conveying the notion of a sampling distribution and its properties? Is it distracting? Is it relevant in the world of big data?

Statistical Collaboration with IU School of Medicine, Terre Haute, Industry Funded, Work with medical students on their research for the scholarly concentration. This involves reviewing their proposals and making recommendations regarding an appropriate analysis; it also includes reviewing their drafts. Occasionally, these are full collaborations that seek publication where I am the lead statistician., (August 2019 - Present)

Committees/Service

Committees

Member, Institute Committee on Animal Care and Use: (2015 - Present); I primarily contributed to the creation and maintenance of an electronic form for IACUC submissions and a Teams page for streamlining our review process.

Member, Faculty Affairs: (2018 - 2021); During the 2020-2021 academic year, I served as "outgoing chair." During this time, I attended meetings with the Dean, VPAA, and current chair (Simon Jones) as we navigated the return to school during the COVID-19 pandemic. In particular, I helped Simon draft initial language for a Professor of Practice position at Rose-Hulman.

Service

Isolated Statisticians Webmaster, American Statistical Association: (2017 - Present); I maintain the website for the Isolated Statisticians group; this is a network of statisticians who are employed in (primarily academic) settings in which there are few other statisticians.

Moodle Mentor: (2017 - Present)

Member of ASA/MAA Joint Committee on Statistics Education: (2016 - 2019)

Provost Hiring Search: (2019); I served on the search committee for the Provost position.

BMTH 498, section BMTH498-01, Senior Capstone III. 1 enrolled.

Course Development

New course/lab development, MA490 Social Justice and Statistical Concepts, This was a 1-CR seminar course examining the use of statistics in social justice contexts. The course was a pilot for a 4-CR version to be run the next academic year. The course blended together statistical concepts with social justice concepts from a humanities perspective. I met regularly with Dr. Livingston in HSSA in order to develop better discussion points and keep the discussion broad (not just focused on the technical aspects)., (November 2021 - March 2022)

Course/lab revision, MA483 Bayesian Data Analysis, Revised the course grading structure to adopt "ungrading." This required changing the types of assignments I provide in order to build more toward students developing a portfolio of work instead of solving specific problems., (November 2021 - March 2022)

Academic Advising

2 undergraduate students advised, 1 graduate students advised. (2021-2022).

Other Advising

Student Organization Advising, InterVarsity Christian Fellowship, 30, Meet with Leadership Team (~ 5 students) each week; meet with others at larger meetings once per term., (2014 - Present)

Undergraduate Research Advising, Lizzie Rhoads, 1, Senior project using Jackson Heart Study., (2021 - 2022)

C Department Head Reviews

Eric Reyes

Teaching and Student Advising

Eric's teaching is well received. The ratings are consistently very strong, mostly excellent and very good. Students feel well prepared for follow on classes, and frequently comment positively about his enthusiasm and availability. He very frequently has students in his office and the interactions are positive.

He has taught mainly MA223 and two upper division courses. He has expert knowledge in statistics and will become one of the leaders in the teaching of statistics at Rose.

He has agreed to become the math major adviser for students with a concentration in statistics.

Professional Development and Curriculum Development:

Eric activity is strong

- Cardiac Catheterization and Interventional Cardiology Self-Assessment Program Lead author for "Chapter 17.1: Basic Statistics and Analysis for the Interventional Cardiologist."
- Understanding Clinical Research Lead author for "Chapter 15: Analytical Methods of Addressing Confounding." pg 209-226. Editors: Renato Lopes and Robert Harrington. This text was used as the foundation for the last unit in the MA482 (Bioengineering Statistics) course.
- Bayesian Average Error Based Approach to Sample Size Calculations for Hypothesis Testing, Journal of Biopharmaceutical Statistics Reduction in First and Recurrent Cardiovascular Events with Ticagrelor Compared with Clopidogrel in the PLATO study This was consulting work I did for Duke Clinical
- Research Institute.
- Developed MA482 (Bioengineering Statistics) to include 80% new material comprised of 4 new units (nonlinear modeling, survival analysis, missing data methods, and causal inference); this adds a great deal of breadth to the course for ABBE students (the primary audience, for which the class is cross-listed).
- Attended various conferences

Service and Departmental Citizenship

Eric has participated in the departmental service activities consistent with an Assistant Professor. He is participating in one of the curriculum committees in the department and is an active participant in the Departmental discussion.

Summary and Comment

Eric is making a strong start towards tenure in all areas.

Academic Affairs Annual Performance Evaluation

DATE: April 9, 2015

NAME: Eric Reyes

TITLE: Assistant Professor

DEPARTMENT: Mathematics

EVALUATION FOR ACADEMIC YEAR: 2013-2014

Teaching and Student Advising

Eric continued his excellent teaching performance in 2013-14. He taught MA 223, Engineering Statistics, each term and received extremely positive reviews from the students. He taught MA 383, Engineering Statistics II, for the first time in the Fall term, and he taught MA 482, Bioengineering Statistics, for the second time in the Spring term; both courses again received extremely positive reviews from the students. His course evaluations are near the top among the entire mathematics department. In addition, he enhanced MA 482 by including statistical topics that often occur in biomedical applications. He is often visited by students, and these interactions are always very positive.

He also advised or helped four student research projects – one was a mathematics senior thesis, one was to analyze data gathered for the Human Powered Vehicle project, one was for a CSSE senior project, and he was a committee member for a BE Master's thesis.

In general, Eric has continued his record of excellent teaching during this academic year.

Professional Development and Curriculum Development:

Eric's professional development activities continue to be very good for an Assistant Professor. He was a co-author on the paper "Role of Diuretics, Beta-Blockers, and Statins in Increasing the Risk of Diabetes in Patients with Impaired Glucose Tolerance: Reanalysis of Data from the NAVIGATOR Study", which appeared in the British Medical Journal. He ended the academic year with two papers under review. In addition, he continued research work in variable screening and selection, part of which forms the basis for a mathematics senior thesis in 2014-15.

Eric presented a talk on "Name-brand vs. Off-brand: a twist on taste testing for a mathematical statistics course" at the Joint Statistical Meetings during the summer of 2014, and he attended the Consortium for the Advancement of Undergraduate Statistics Education Electronic Conference on Teaching Statistics.

Eric also attended a Rose-Hulman workshop and completed an online course regarding the fundamentals of online and blended courses. This work on using the Quality Matters (QM) rubrics has enhanced his face-to-face courses, and he plans to utilize them in later online courses that he will develop.

Each of Eric's professional development activities are appropriate for a faculty member, as they allow and encourage him to grow both in his research area and with his teaching assignments.

Service and Departmental Citizenship

Eric has participated in the departmental service activities consistent with an Assistant Professor. He was a member of our Statistics and Operations Research Curriculum Development Group, and was of great help with the High School Mathematics Competition and the Undergraduate Mathematics Conference. In addition, he served on the Institute's Quality of Education committee.

He was also an excellent departmental citizen. He attended many of our seminars and functions, and was often willing to help with any tasks that needed to be done.

Summary and Comment

Eric continues to make excellent progress towards tenure in all areas. He has proven to be a valuable member of the department.

Recommendations: Eric should be retained, but should not be promoted nor awarded tenure at this time.

My signature below acknowledges that the information presented within this document was clearly communicated to me during the Annual Performance Evaluation, but does not necessarily imply that I agree with this Performance Evaluation.

Faculty Member Signature:  Date: 4-9-2015

Department Head Signature:  Date: 4-9-15

Academic Affairs Annual Performance Evaluation

DATE: December 1, 2015

NAME: Eric Reyes

TITLE: Assistant Professor

DEPARTMENT: Mathematics

EVALUATION FOR ACADEMIC YEAR: 2014-2015

Summary

Eric Reyes continues to make excellent progress towards tenure in all areas. His teaching and course development continues to be high quality, highlighted by his development of a course in Bayesian Statistics. His professional development was outstanding, as evidenced by three published papers and two presentations. His service was also very strong, especially his role as co-chair of the Undergraduate Mathematics Conference. He has proven to be a valuable member of the department, and one who is viewed as a future leader of the department.

Teaching and Student Advising

Eric continued his excellent teaching performance in 2014-15. He taught MA 223, Engineering Statistics, each term and received extremely positive reviews from the students. In the fall he developed MA 480, Bayesian Statistics, which was well-received, he taught MA 481 Mathematical Statistics in the winter and he taught MA 482, Bioengineering Statistics, in the spring term; all of these courses received extremely positive reviews from the students. His course evaluations are near the top among the entire mathematics department. His courses are often revised to utilize current best practices in statistics education. He is often visited by students, and these interactions are always very positive.

Eric also attended a Rose-Hulman workshop and generated an online version of MA 223. He plans to utilize the material within this course as part of a flipped course in the upcoming year.

He also advised or helped two student research projects – one was a mathematics senior thesis and the other was a mathematics senior project. He also was a faculty advisor for InterVarsity Christian Fellowship.

In general, Eric has continued his record of excellent teaching during this academic year.

Professional Development and Curriculum Development:

Eric's professional development activities continue to be outstanding for an Assistant Professor. He was a co-author on the papers "Endoscopic harvesting device type and outcomes in patients undergoing coronary artery bypass surgery", "Tutorial: Survival estimation for Cox regression models with time-varying coefficients", and "Long-term clinical and angiographic outcomes in patients with diabetes undergoing coronary artery bypass graft surgery: Results from the PREVENT-IV Trial". For two of these papers he was the statistician on a clinical paper.

Eric (along with Diane Evans) both presented the talk "Six Sigmas of Separation: Strategies for making interdisciplinary connections" at the US Conference on Teaching Statistics and led the workshop "Engaging intro statistics students with activities". Both of these presentations showcased Eric's leadership in undergraduate statistics education.

Each of Eric's professional development activities are appropriate for a faculty member, as they allow and encourage him to grow both in his research area and with his teaching assignments.

Service and Departmental Citizenship

Eric has participated in the departmental service activities consistent with an Assistant Professor. He was a co-chair of our Undergraduate Mathematics Conference and helped secure funding and support from multiple companies. He chaired our Statistics and Operations Research Curriculum Development Group, and was of great help with the High School Mathematics Competition and the Undergraduate Mathematics Conference. In addition, he served on the Institute's Quality of Education committee, where he was part of a sub-committee on academic misconduct.

He was also an excellent departmental citizen. He attended many of our seminars and functions, and was often willing to help with any tasks that needed to be done. He is willing to participate in departmental discussions, and often brings useful insights (with evidence) to the conversations.

Recommendations: Eric should be retained, but should not be promoted nor awarded tenure at this time.

My signature below acknowledges that the information presented within this document was clearly communicated to me during the Annual Performance Evaluation, but does not necessarily imply that I agree with this Performance Evaluation.

Faculty Member Signature:  Date: 12-1-2015

Department Head Signature:  Date: 12/1/15

Academic Affairs Annual Performance Evaluation

DATE: March 8, 2017

NAME: Eric Reyes

TITLE: Assistant Professor

DEPARTMENT: Mathematics

EVALUATION FOR ACADEMIC YEAR: 2015-2016

Summary

Eric Reyes continues to make excellent progress towards tenure in all areas. His teaching and course development continues to be high quality, highlighted by his redevelopment of the Statistical Programming course. His professional development was outstanding, as evidenced by three published papers and two presentations. His service was also very strong, especially his role as co-organizer of the Undergraduate Mathematics Conference. He has proven to be a valuable member of the department, and one who continues to be viewed as a future leader of the department.

Teaching and Student Advising

Eric's teaching continues to be excellent; he has become one of the top educators in the department. This year he taught MA 223, MA 386 Statistical Programming, MA 485 Applied Regression Analysis and MA 482 Bioengineering Statistics; in each case the course was extremely well-organized and the students were quite positive about the learning experience. Eric completely revamped MA 223 this year, teaching it as a flipped classroom each term by using material he developed for the online MA 223 course. Most students enjoyed this approach, and Eric found small ways to improve the course each term. He also changed MA 386 from a SAS-based course to an R-based course. He also changed the topics so that it had more of a Data Science feel. This course fits well with our future plans in statistics and data science. Finally, he taught MA 485 for the first time with great success.

He also advised or helped three student research projects – one was a computer science senior thesis (Wenjun Kong), one was on the math portion of her MA/ECON senior project (Amy Kamperman), and the other was the beginning of a mathematics senior thesis (Xiaomo Wang). In addition, he served as a committee member for a Masters' thesis.

In addition, Eric served as the minor advisor for Statistics, and was the advisor for two mathematics majors. He also was a faculty advisor for InterVarsity Christian Fellowship.

In general, Eric has continued his record of excellent teaching during this academic year.

Professional Development and Curriculum Development:

Eric's professional development activities continue to be very strong for an Assistant Professor. He was a co-author on the paper "Micromotion at the tibial plateau in primary and revision total knee arthroplasty: fixed versus rotating platform designs," which was published in the journal *Bone & Joint Research*; he was the statistician on a clinical paper.

In addition, Eric made presentations at the Joint Statistical Meetings. He served as a panelist for a session about opportunities for statisticians at small colleges, and he led a round-table discussion on Specification Grading in the Statistics Classroom.

Furthermore, Eric received an internal KEEN course development grant to infuse entrepreneurial-minded learning into his Statistical Programming course. Also for this course, Eric attended a workshop sponsored by the American Statistical Association on Machine Learning from a Statistical Perspective.

Each of Eric's professional development activities are very appropriate for a faculty member, as they allow and encourage him to grow both in his research area and with his teaching assignments.

Service and Departmental Citizenship

Eric has participated in the departmental service activities consistent with an Assistant Professor. He was a co-organizer of our Undergraduate Mathematics Conference, he served on our Hiring Committee, he chaired our Statistics and Operations Research Curriculum Development Group, and he was of great help with the High School Mathematics Competition. In addition, he served on the Institute's Animal Care and Use committee. Finally, he served on a joint ASA-MAA Committee on Statistics Education, which is making recommendations regarding statistics curriculum at the undergraduate level.

He was also an excellent departmental citizen. He attended many of our seminars and functions, and was often willing to help with any tasks that needed to be done. He is willing to participate in departmental discussions, and often brings useful insights (with evidence) to the conversations.

Recommendations: Eric should be retained, but should not be promoted nor awarded tenure at this time.

My signature below acknowledges that the information presented within this document was clearly communicated to me during the Annual Performance Evaluation, but does not necessarily imply that I agree with this Performance Evaluation.

Academic Affairs Annual Performance Evaluation

DATE: August 16, 2017

NAME: Eric Reyes

TITLE: Assistant Professor

DEPARTMENT: Mathematics

EVALUATION FOR ACADEMIC YEAR: 2016-2017

Summary and Recommendation

Eric should be promoted to Associate Professor and awarded tenure. His teaching and his professional development are very strong, and his service is more than appropriate for an assistant professor. He is looked upon as a future leader of the department.

Teaching and Student Advising

Eric's teaching continues to be excellent. This year he taught MA 223, MA 386 Statistical Programming, MA 481 Mathematical Statistics and MA 482 Bioengineering Statistics; each course was extremely well-organized and the students were quite positive about the learning experience. MA 386 was part of a KEEN course development grant, through which he revised the weekly portfolio assignments. He also taught MA 381 Introduction to Probability for the first time, with again very positive results. This year Eric utilized specification-based grading in each of his classes, with excellent results. Most students appreciated this approach, and Eric found small ways to improve this approach each term.

He also advised three student capstone experiences within the department. In addition, Eric served as the minor advisor for Statistics. He also was a faculty advisor for InterVarsity Christian Fellowship.

In general, Eric has continued his record of excellent teaching during this academic year.

Professional Development and Curriculum Development:

Eric's professional development activities continue to be very strong for an Assistant Professor. He presented work at a talk at the Joint Statistics Meeting this summer, which was joint work with one of his senior thesis students, and he also gave a talk on statistics education at North Carolina State University. He also presented a peer-reviewed workshop on Specifications Grading at the US Conference on Teaching Statistics. Finally, he attended a workshop on how to revise a statistics curriculum to be more project-based.

Each of Eric's professional development activities are very appropriate for a faculty member, as they allow and encourage him to grow both in his research area and with his teaching assignments.

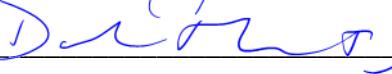

Service and Departmental Citizenship

Eric has participated in the departmental service activities consistent with an Assistant Professor. He was a co-organizer of our Undergraduate Mathematics Conference, he chaired our Statistics and Operations Research Curriculum Development Group, and he was of great help with the High School Mathematics Competition, where he helped organize and revamp our registration process. In addition, he served on the Institute's Animal Care and Use committee. He was also a member of the Data Science Core Group, which helped develop the data science minor, and he worked with Corporate Engagement to host the Big Data Summit. Finally, he continues to serve on a joint ASA-MAA Committee on Statistics Education, which is making recommendations regarding statistics curriculum at the undergraduate level.

He was also an excellent departmental citizen. He attended many of our seminars and functions, and was often willing to help with any tasks that needed to be done. He is willing to participate in departmental discussions, and often brings useful insights (with evidence) to the conversations.

My signature below acknowledges that the information presented within this document was clearly communicated to me during the Annual Performance Evaluation, but does not necessarily imply that I agree with this Performance Evaluation.

Department Head Signature:  Date: 8/16/17

Academic Affairs Annual Performance Evaluation

DATE: January 9, 2019

NAME: Eric Reyes

TITLE: Associate Professor

DEPARTMENT: Mathematics

EVALUATION FOR ACADEMIC YEAR: 2017-2018

Summary and Recommendation

Eric was promoted to Associate Professor and awarded tenure after the 2017-18 academic year. His teaching is excellent, his professional development is very good, and his service is more than appropriate for an associate professor. He is looked upon as a future leader of the department.

Teaching and Student Advising

Eric's teaching continues to be excellent. This year he taught MA 223, MA 386 Statistical Programming, MA 480 Bayesian Statistics and MA 482 Bioengineering Statistics; each course was extremely well-organized and the students were quite positive about the learning experience. During the year Eric worked on an experimental curriculum with Megan Heyman for MA 223, one that was proposed and later adopted by the department. Throughout the year he continued to make substantive changes both to the curriculum and to his implementation of it, producing a quality course. MA 480 was offered for the second time with very positive results. The changes he made from the first offering greatly improved the course. This year Eric continued to utilize specification-based grading in each of his classes, with excellent results. Most students appreciated this approach, and Eric found small ways to improve this approach each term.

He also advised two student capstone experiences within the department. In addition, Eric served as the minor advisor for Statistics.

In general, Eric has continued his record of excellent teaching during this academic year.

Professional Development and Curriculum Development:

Eric's professional development activities continue to be very good. He co-presented with Megan Heyman a webinar on "Introducing data science elements through parallel courses in statistics and computing" through

the Electronic Conference on Teaching Statistics. He was also part of a round table discussion through the same conference on whether the Central Limit Theorem is still central to an introductory statistics course.

Both of these activities are very appropriate for a faculty member, as they allow and encourage him to grow both in his teaching and his research. Now that Eric has earned tenure and starts to look towards promotion to full professor, it is appropriate that he look to expand his professional development activities in both research and pedagogy.

Service and Departmental Citizenship

Eric is a strong participant in the departmental service activities. He was a co-organizer of our Undergraduate Mathematics Conference, he chaired our Statistics and Operations Research Curriculum Development Group, and he was of great help with the High School Mathematics Competition, where he helped organize and revamp our registration process. In addition, he served on the Institute's Animal Care and Use committee and the Quality of Education committee. He also was a faculty advisor for InterVarsity Christian Fellowship and the Lilly Scholars Network. Finally, he continues to serve on a joint ASA-MAA Committee on Statistics Education, which is making recommendations regarding statistics curriculum at the undergraduate level.

He was also an excellent departmental citizen. He attended many of our seminars and functions and was often willing to help with any tasks that needed to be done. He is willing to participate in departmental discussions, and often brings useful insights (with evidence) to the conversations.

My signature below acknowledges that the information presented within this document was clearly communicated to me during the Annual Performance Evaluation, but does not necessarily imply that I agree with this Performance Evaluation.

Academic Affairs Annual Performance Evaluation

DATE: February 10, 2021

NAME: Eric Reyes

TITLE: Associate Professor

DEPARTMENT: Mathematics

EVALUATION FOR ACADEMIC YEAR: 2018-2019

Summary and Recommendation

Eric is making progress towards promotion to full professor. His teaching is excellent, his professional development is very good, and his service is strong. He is looked upon as a leader of the department and institute.

Teaching and Student Advising

Eric's teaching continues to be excellent. This year he taught MA 223, MA 386 Statistical Programming, MA 481 Mathematical Statistics and MA 482 Biostatistics; each course continued to be well-organized and the students were quite positive about the learning experience. In MA 223 he taught a redesigned curriculum with positive results. He continues to use mastery-based grading in each of his classes, with excellent results. Most students appreciated this approach, and Eric found small ways to improve this approach each term.

He also advised four student capstone experiences within the department. In addition, Eric served as the minor advisor for Statistics.

In general, Eric has continued his record of excellent teaching during this academic year.

Professional Development and Curriculum Development:

Eric's professional development activities continue to be very good. He co-authored a paper "Primary stability with cementless rotating platform total knee arthroplasty" which was published in the Journal of Knee Surgery. He also gave two workshops – one on Analyzing and visualizing data for the 2019 Summer Undergraduate Research Community and another (with Sylvia Carlisle) on Specifications-based grading. Eric also served as an advisor for students within the IU School of Medicine Terre Haute on research they were conducting.

Eric's professional development activities point towards continued growth. He is encouraged to continue pursuing such activities.

Service and Departmental Citizenship

Eric's service remains strong. He was a co-organizer of our Undergraduate Mathematics Conference, he served on our Statistics and Operations Research Curriculum Development Group, and he was of great help with the High School Mathematics Competition, where he helped organize and revamp our registration process. In addition, he served on the Institute's Animal Care and Use committee and the Faculty Affairs Committee. He was also a member of the Provost/VPAAC Search Committee in the Spring of 2019. He also was a faculty advisor for InterVarsity Christian Fellowship and the Lilly Scholars Network. Finally, he continues to serve on a joint ASA-MAA Committee on Statistics Education, which is making recommendations regarding statistics curriculum at the undergraduate level.

He was also an excellent departmental citizen. He attended many of our functions and was often willing to help with any tasks that needed to be done. He is willing to participate in departmental discussions, and often brings useful insights (with evidence) to the conversations. Eric is also becoming one of the leaders within the department; he is someone that others seek for advice and opinions. He is quickly becoming a role model for younger faculty.

My signature below acknowledges that the information presented within this document was clearly communicated to me during the Annual Performance Evaluation, but does not necessarily imply that I agree with this Performance Evaluation.

Department Head Signature:  Date: 5/24/21

Academic Affairs Annual Performance Evaluation

DATE: February 10, 2021

NAME: Eric Reyes

TITLE: Associate Professor

DEPARTMENT: Mathematics

EVALUATION FOR ACADEMIC YEAR: 2019-2020

Summary and Recommendation

Eric continues to make excellent progress towards promotion to full professor. His teaching is excellent, his professional development is very good, and his service is strong. Eric was on mini-leave during the fall term. He is looked upon as a leader of the department and institute.

Teaching and Student Advising

Eric's teaching continues to be excellent. This year he taught MA 223, MA 483 Bayesian Statistics and MA 482 Biostatistics; each course continued to be well-organized and the students were quite positive about the learning experience. He makes adjustments to each of his courses upon reflection, and these changes greatly improve the courses. In MA 223 he teaches the course primarily as a flipped course which allows the students to engage with the material. He continues to use mastery-based grading in each of his classes, with excellent results. Most students appreciated this approach, and Eric found small ways to improve this approach each term.

He also advised three student capstone experiences within the department. In addition, Eric served as the minor advisor for Statistics.

In general, Eric has continued his record of excellent teaching during this academic year.

Professional Development and Curriculum Development:

Eric's professional development activities continue to be very good. During the fall term mini-leave he consulted with InterVarsity Christian Fellowship, modeling the growth of college chapters to identify characteristics of "healthy" chapters. He (and Megan Heyman) gave a talk on "Using a Practicum as the Cumulative Assessment in Introductory Statistics" through the Electronic Conference on Teaching Statistics in

May 2020; they were later invited back to further discuss their insights as a conference “Hot Topic.” He was also part of a campus group investigating the impact of the Summer Undergraduate Research Community.

Eric was also part of the “peer mentor” team that led the Creating Adaptable Courses course for faculty preparing to teach courses in the Fall of 2021. He helped to structure some of the activities and the overall syllabus of the course.

Eric’s professional and curriculum development activities point towards continued growth. He is encouraged to continue pursuing such activities.

Service and Departmental Citizenship

Eric service remains very good. Within the department he was a member of Statistics and Operations Research Curriculum Development Group. In addition, he served as chair of Faculty Affairs Committee. Finally, he continues to serve as faculty advisor for InterVarsity Christian Fellowship and the Lilly Scholars Network. He was also the departmental representative on CASO.

He was also an excellent departmental citizen. He attended many of our functions and was often willing to help with any tasks that needed to be done. He is willing to participate in departmental discussions, and often brings useful insights (with evidence) to the conversations. His leadership and mentoring of faculty who were developing adaptable courses for the 2020-21 academic year was important and notable. He is viewed as a leader within the department and his thoughts are often sought when issues arise within the department. He continues to be a role model for younger faculty.

My signature below acknowledges that the information presented within this document was clearly communicated to me during the Annual Performance Evaluation but does not necessarily imply that I agree with this Performance Evaluation.

NAME: Eric Reyes

TITLE: Associate Professor

DEPARTMENT: Mathematics

EVALUATION FOR ACADEMIC YEAR: 2020-2021

The unprecedented changes in teaching required by the pandemic environment in 2020 and 2021 limited faculty time and energy for other activities—indeed, for professional life in general. Faculty activity during this period must be understood within this context.

Summary and Recommendation

During the 2020-21 academic year Eric continued to make excellent progress towards promotion to full professor. His teaching is excellent, his professional development is excellent, and his service is very strong. He is looked upon as a leader of the department and institute.

Teaching and Student Advising

Eric's teaching continues to be excellent. This year he taught MA 223, MA 386 Statistical Programming and MA 482 Biostatistics; each course continued to be well-organized, and the students were quite positive about the learning experience. Eric used his experience with the Creating Adaptable Courses program (of which he was one of the leaders) to transform these courses into hybrid courses, crafting videos and appropriate assessments designed to take advantage of a flipped classroom experience. He continues to use mastery-based grading in each of his classes, with excellent results. Most students appreciated this approach, and Eric continues to find ways to improve this approach each term. Eric also offered two independent study courses (SAS Programming and Nonparametric Inference) for students seeking to learn more advanced statistics topics.

He also advised a student capstone experience within the department. In addition, Eric served as the minor advisor for Statistics.

In general, Eric has continued his record of excellent teaching during this academic year.

Professional Development and Curriculum Development:

Eric's professional development activities were excellent this year. Eric continued to work as part of the "peer mentor" team that led the Creating Adaptable Courses program for faculty preparing to teach courses for the 2020-21 academic year. He worked closely with faculty, especially within the department, to ensure that their courses were well-suited for teaching in the pandemic environment. He then disseminated his experiences from this program through various entities. He published the peer-reviewed blogs "Specifications-grading: An Overview" and "Specifications-grading: An Example" within the StatTLC Blog. He also co-authored the chapter "Creating Adaptable Courses: A course design approach that accommodates flexible delivery" for the book *Resilient Pedagogy*. He also published the paper "Sharing in my students' struggles to foster their success" for the Journal for Research and Practice of College Teaching. Finally, he was an invited presenter during the Indiana MAA Project NExT panel discussion on lessons learned from the pandemic.

In addition, Eric created videos to accompany the Schaum's Outlines in Probability book.

Eric's professional and curriculum development activities point towards continued growth and future promotion to the rank of professor.

Service and Departmental Citizenship

Eric's service remains very strong. Within the department he was a member of the Statistics and Operations Research Curriculum Development Group. In addition, he served as a member of the Faculty Affairs Committee. Finally, he continues to serve as faculty advisor for InterVarsity Christian Fellowship. He was also the departmental representative on CASO.

He was also an excellent departmental citizen. He attended many of our functions and was often willing to help with any tasks that needed to be done. He is willing to participate in departmental discussions, and often brings useful insights (with evidence) to the conversations. His leadership and mentoring of faculty who were developing adaptable courses for the 2020-21 academic year was important and notable. He is viewed as a leader within the department and his thoughts are often sought when issues arise within the department. He continues to be a role model for younger faculty.

My signature below acknowledges that the information presented within this document was clearly communicated to me during the Annual Performance Evaluation but does not necessarily imply that I agree with this Performance Evaluation.

EVALUATION FOR ACADEMIC YEAR: 2021-2022

The unprecedented changes in teaching required by the pandemic environment in 2020 and 2021 limited faculty time and energy for other activities—indeed, for professional life in general. Faculty activity during this period must be understood within this context.

Summary and Recommendation

During the 2021-22 academic year Eric continued to make excellent progress towards promotion to full professor. His teaching is excellent, his professional development is excellent, and his service is very strong. He continues to be looked upon as a leader of the department and institute.

Teaching and Student Advising

Eric's teaching continues to be excellent. This year he taught MA 223, MA 382, MA 386 Statistical Programming, MA 482 Biostatistics and MA 483 Bayesian Data Analysis; each course continued to be well-organized, and the students were quite positive about the learning experience. He continues to use mastery-based grading in many of his classes, with excellent results. Most students appreciated this approach, and Eric continues to find ways to improve this approach each term. He also tried “ungrading” methods in a course, with positive results. He also created a 1-credit seminar course MA 490 Social Justice and Statistical Concepts

He also advised a student biomathematics capstone experience within the department and helped advise a graduate student. In addition, Eric served as the minor advisor for Statistics.

In general, Eric has continued his record of excellent teaching during this academic year. He continues to make small improvements to his courses with positive results.

Professional Development and Curriculum Development:

Eric's professional development activities were very good this year. He continued his collaboration with the IU School of Medicine, where he works with medical students on their research. He also led various sessions at the Faculty Teaching Workshop and was a panelist in a session of the American Statistical Association regarding non-traditional grading in statistics courses.

Eric's professional and curriculum development activities point towards continued growth and future promotion to the rank of professor. He should explore how to get more students involved in his research, especially for their capstone experiences.

Service and Departmental Citizenship

Eric's service remains excellent. Within the department he was chair of the Mathematics Group for Program Improvement, which oversees the assessment of the mathematics program. He also served on the planning committee for the High School Math Contest. He was also the departmental representative on CASO, and he continues to serve as the departmental Moodle Mentor.

Eric was also very active with Institute service. He was a member of the Animal Care and Use Committee, and a member of the Rose Show Planning Committee. He was also the Teaching Workshop Convener and a convener for one of the campus Reading Groups. In addition, he served on the Hiring Committee for a new Economics faculty member and also as the internal consultant for the Mathematics Department Head search. Finally, he continues to serve as faculty advisor for InterVarsity Christian Fellowship.

He was also an excellent departmental citizen. He attended many of our functions and was often willing to help with any tasks that needed to be done. He is willing to participate in departmental discussions, and often brings useful insights (with evidence) to the conversations. He is viewed as a leader within the department and his thoughts are often sought when issues arise within the department. He continues to be a role model for younger faculty.

My signature below acknowledges that the information presented within this document was clearly communicated to me during the Annual Performance Evaluation but does not necessarily imply that I agree with this Performance Evaluation.

EVALUATION FOR ACADEMIC YEAR: 2022-2023

Summary and Recommendation

During the 2022-23 academic year Eric continued to make excellent progress towards promotion to full professor. His teaching is excellent, his professional development is excellent, and his service is very strong. He continues to be looked upon as a leader of the department and institute.

Teaching and Student Advising

Eric's teaching continues to be excellent. This year he again taught MA 223, MA 386 Statistical Programming, MA 482 Biostatistics; each course continued to be well-organized, and the students were quite positive about the learning experience. He continues to use mastery-based grading in many of his classes, with excellent results. Most students appreciated this approach, and Eric continues to find ways to improve this approach each term. He also taught a cross-listed course MA 490 Social Justice and Statistical Concepts with an HSSA professor. This course was well received by the students.

He also was the academic advisor for 6 Y1 ME students.

In general, Eric has continued his record of excellent teaching during this academic year. He continues to make small improvements to his courses with positive results.

Professional Development and Curriculum Development:

Eric's professional development activities were very good this year and encompass both statistical analysis and pedagogical work. He continued his collaboration with the IU School of Medicine, where he works with medical students on their research. This led to a publication in the *Journal of Regional Medical Campuses*. In

addition, Eric presented work on non-traditional grading at the US Conference on Teaching Statistics. He also led various sessions at the Institute's Faculty Teaching Workshop and was a panelist and co-organizer in a session of the Midwest Conference on the Scholarship of Teaching and Learning regarding alternative assessment approaches.

Eric's professional and curriculum development activities point towards continued growth and future promotion to the rank of professor. He should explore how to get more students involved in his research, especially for their capstone experiences.

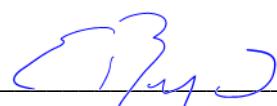

Service and Departmental Citizenship

Eric's service remains excellent. Within the department he was chair of the Mathematics Group for Program Improvement, which oversees the assessment of the mathematics program. He also served on the planning committee for the High School Math Contest. He was also the departmental representative on CASO, and he continues to serve as the departmental Moodle Mentor.

Eric was also very active with Institute service. He was a member of the Animal Care and Use Committee, and a member of the Rose Show Planning Committee. He was also the Teaching Workshop Co-Coordinator. In addition, he served on one of the Strategic Plan Affordability Design Teams. Finally, he continues to serve as faculty advisor for InterVarsity Christian Fellowship.

He was also an excellent departmental citizen. He attended many of our functions and was often willing to help with any tasks that needed to be done. He is willing to participate in departmental discussions, and often brings useful insights (with evidence) to the conversations. He is viewed as a leader within the department and his thoughts are often sought when issues arise within the department. He continues to be a role model for younger faculty.

Academic Affairs Annual Performance Evaluation

DATE: September 9, 2024

NAME: Eric Reyes

TITLE: Associate Professor

DEPARTMENT: Mathematics

EVALUATION FOR ACADEMIC YEAR: 2023-2024

Summary and Recommendation

During the 2023-24 academic year Eric continued to make excellent progress towards promotion to full professor. His teaching is excellent, his professional development is excellent, and his service is very strong. He continues to be looked upon as a leader of the department and institute.

Eric deserves to be promoted to Professor. Given his sustained excellence in teaching, professional development and service it is very reasonable that he seek promotion at this time. He has also handled the expected leadership and other responsibilities that not only come with being a tenured faculty member at Rose but also one who achieves the rank of Professor.

Teaching and Student Advising

Eric's teaching continues to be excellent. This year he again taught MA 223 and MA 482 Biostatistics; each course continued to be well-organized, and the students were quite positive about the learning experience. He continues to use mastery-based grading in many of his classes, with excellent results. Most students appreciated this approach, and Eric continues to find ways to improve this approach each term. He also taught MA 382 Intro to Statistics with Probability, MA 483 Bayesian Data Analysis and MA 381 Intro to Probability; he has taught these previously but are not courses he teaches every year. These courses were also well received by the students. As one student noted in a course evaluation: "Dr. Reyes exudes passion about his field and loves to help students when they are interested in learning more. He is a great lecturer and offers a lot of additional course material for those curious."

He also was the academic advisor for 6 Y1 ME students and he supervised a senior biomathematics capstone student.

In general, Eric has continued his record of excellent teaching during this academic year. He continues to develop as an instructor by incorporating new teaching approaches and assessment ideas, and I expect he will continue this throughout his career. His quality of teaching is what we would expect for faculty members seeking promotion to Professor.

Professional Development and Curriculum Development:

Eric's professional development activities were very good this year and encompass both statistical analysis and pedagogical work. He continued his collaboration with the IU School of Medicine, where he works with medical students on their research. This led to a paper submission in the *Community Mental Health Journal*. He also was a co-author on a paper discussing non-traditional grading in statistics courses that was published in the *Journal of Statistics and Data Science Education*. In addition, Eric presented some research at the Joint Statistical Meetings. He also led various sessions at the Institute's Faculty Teaching Workshop and presented some of his recent work for the Rose-Hulman Sustainability Network.

Eric's professional and curriculum development activities point towards continued growth and future promotion to the rank of professor. It is anticipated that he will continue to demonstrate to students how to learn new material through these activities. His professional development is very appropriate and exceeds the standard for faculty members seeking promotion to Professor.

Service

Eric's service remains excellent. Within the department he was chair of the Mathematics Group for Program Improvement, which oversees the assessment of the mathematics program. He was also the departmental representative on CASO, and he continues to serve as the departmental Moodle Mentor.

Eric was also very active with Institute service. He was a member of the Animal Care and Use Committee, and a member of the Rose Show Planning Committee. He was also the Teaching Workshop Co-Coordinator. In addition, he began service on one of the Innovation by Design Action Teams and he continues to serve as faculty advisor for InterVarsity Christian Fellowship. Finally, he served as Academic Affairs Faculty Representative to the Board of Trustees.

Eric's service within the department and Institute has always been excellent and exceeds the expectations on a faculty member seeking promotion to Professor. It is expected that he will be looked upon as a leader of the department and institute for many years.

Leadership and Departmental Citizenship

While this is not a stated area of review for annual evaluations, when someone seeks promotion to Promotion it is useful to consider.

Eric has exhibited strong leadership skills and potential during his time at Rose. He has looked for opportunities to provide leadership both within the department (assessment, teaching innovations) and

within the institute (CASO, Teaching Workshop, Faculty Representative to Board of Trustees); these endeavors demonstrate that he is viewed as a leader within the department and the Institute.

Eric is also an excellent departmental citizen. He attends many of our functions and is often willing to help with any tasks that need to be done. He is willing to participate in departmental discussions, and often brings useful insights (with evidence) to the conversations. He is viewed as a leader within the department and his thoughts are often sought when issues arise within the department. He continues to be a role model for younger faculty.

His demonstrated leadership and his departmental citizenship are consistent with expectations of a faculty member seeking promotion to Professor.
